

UNIVERSIDADE LUSÍADA
LISBOA

Course Unit Program
Mathematical Analysis

Academic Year 2023/2024

1. Organic Unit

Faculty of Business and Economic Sciences

2. Course

Computer Engineering

3. Cycle

1st

4. Course Unit

Mathematical Analysis (L9006)

5. Scientific Area

6. Curricular Year

1st

7. Type of Curricular Unit / Semester

2nd Semester

UNIVERSIDADE LUSÍADA
LISBOA

8. Class type and workload (work time)

Theoretical classes:

Practical classes:

Theoretical-Practical Classes 30,00

Tutorial Guidance: 20,00

9. ECTS Credits

6,00

10. Scientific Area Coordinator

11. Regent

Prof. Doutora MARIA ADELAIDE DUARTE CARREIRA LEITE VIDEIRA

12. Assistants

13. Teaching Language

Portuguese

14. General Objectives

The curricular unit, by promoting the learning of some structural concepts of Mathematical Analysis and by presenting some applications of these concepts, aims to provide students with the mathematical tools that are indispensable for the study of various disciplines in the field of Informatics, namely those involving quantitative aspects.

15. Specific Objectives

To acquaint the students with the concept of integral for real functions and double and triple integrals

16. Skills to be acquired

Students should be acquainted

- with the concept and the properties of integrals: simple, double and triple and some applications.
- to use polar, cylindric or spheric coordinates

17. Teaching Methodology

The course is organised in theoretical/practical sessions (with presentation of main concepts and properties) supported by tutorial sessions where examples of application will be presented.

UNIVERSIDADE LUSÍADA
LISBOA

18. Course Unit Program

- 1.1. Primitive concept and general properties
- 1.2. immediate primitives
- 1.3. Primitivation by parts
- 1.4. Primitivation of rational fractions
- 1.5. Primitivation by substitution

2. One-dimensional integral calculus

- 2.1. The Riemann Integral
- 2.2. integral properties
- 2.3. Barrow's Theorem
- 2.4. Calculation of limited flat areas
- 2.5. indefinite integrals
- 2.6. improper integrals

3. Multiple integrals

- 3.1. Double integral. Definition and properties. Fubini' Theorem. Double integrals in non-rectangular domains. Change of variables. Polar coordinates. The integral as a measure.
- 3.2. Triple integrals. Definition and properties. Fubini' Theorem. Change of variables. Cylindric and spherical coordinates. Applications.

19. Assessment Methods

The continuous assessment component consists of two points written during the semester

20. Didactic Resources

Bibliographic indications and a theoretical-practical workbook available on Moodle.

21. Sustainability Objectives

The knowledge acquired in the course is essential for the various aspects of computer engineering

22. Keywords

Antiderivatives
Riemann Integral
Multiple integrals
Areas
Volumes

23. Main Bibliography

Author(s): R. Larson, R. P. Hostetler, B. H. Edwards
Title: Cálculo
Edition: 1^a Year: 2006
Local: São Paulo
Publisher: McGraw-Hill

Author(s): A. Monteiro, I. Matos
Title: Primitivas-Cadernos de Matemática
Edition: 1^a Year: 2014
Local: Amadora
Publisher: Orion

Author(s): B.Louro; Ana Sá
Title: Cálculo Diferencial e Integral em R
Edition: 1^a Year: 2015
Local: Lisboa
Publisher: MatCubo-Bertrand

24. Complementary Bibliography

Author(s): Salas,Hille
Title: Calculus
Edition: 10^a Year: 2018
Local: New Jersey
Publisher: John Wiley and sons

Author(s): B. Demidovitch
Title: Problemas e Exercícios de Análise Matemática
Edition: 2^a Year: 1993
Local: Lisboa
Publisher: McGraw-Hill
