14. General Objectives

It is intended to encourage students to critically reflect on the pedagogical implications of scientific data from the psychology of learning.
The methodological strategies will favor participatory training, oriented towards discovery and knowledge of the learning processes themselves, which were developed throughout their academic career.

15. Specific Objectives

Enable students to recognize the different types, mechanisms and factors of different theoretical approaches to the learning process. It is intended to provide future psychologists with conceptual instruments that facilitate the analysis and understanding of learning processes.

16. Skills to be acquired

At the end of the course, students should be able to criticize different theories of learning and discuss the influence of internal and external factors.

17. Teaching Methodology

We will give priority to the investigative and critical spirit, privileging the oral or computer presentation of topics for discussion in a classroom environment. The oral exposition of the themes will be accompanied by reading and presentation works on scientific texts.
